**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shouji'838 in view of JP'375.

The applied Shouji'838 patent teaches that it is known in the art to make and use ITO and ATO powders as infrared blocking materials. See column 6, lines 42-67, column 7, lines 1-20, lines 44-67, column 8, lines 5-33, claims. The applied reference does not specifically teach that ITO and ATO powders may be mixed together. Also, the prior art does not teach that the infrared powders may be produce from the claimed salts.

However, the applied JP'375 reference teach that it is known in the art to use mixtures of ITO and ATO powders in infrared applications. It would have been obvious to one having ordinary skill in the art at the time of the invention to use such mixtures in the Shouji'838 patent,

since such would improve solar radiation shielding of the produce material. Also, it would have been obvious to select starting materials to optimize process of mixing powders since such would improve solar response of the coating. JP'375 reference teaches the claimed particle sizes and would have been obvious to modify Shouji'838 to produce such particle sizes to improve solar response.
